

## Environmental guideline

### Official environmental guideline of EPOXONIC GmbH

EPOXONIC Reaktionsharzsysteme has set itself the goal of taking environmental aspects into account in all business activities and minimizing the environmental impact of our activities and products.

We produce and sell adhesives, casting resins and specialty products based on epoxy resins. We know that as a company that works with hazardous substances, we will always have an impact on the environment. That is why we do everything we can to minimize this impact.

It goes without saying that we comply with the legal requirements for environmental protection and occupational health and safety. In addition, we set ourselves our own, more far-reaching goals.

- As early as the development stage of new products, we pay attention to use raw materials that are less harmful to the environment and to manufacture our products in an environmentally friendly way. We are constantly testing bio-based raw materials in the course of development and already have some in our products.
- We comply with the environmental requirements of ISO 14001, even though we no longer have certification.
- We give preference to suppliers based in Germany or Europe in order to minimize emissions from transport.
- We minimize the amount of waste and ensure that unavoidable waste is recycled or disposed in an environmentally friendly manner.
- We encourage our employees to think in an environmentally conscious and sustainable way and to use raw materials and energy sparingly.
- Our business trips are planned and organized in such a way that they have as little impact on the environment as possible.

All our environmentally relevant business processes are integrated into our management system.

We are constantly looking for ways to improve these processes.
